

Non-rigid enclosures / Valve jackets

Flexi-Jaxx®

DP Systems is also known as a supplier of flexible, silicone jackets.

These Flexi-jaxx are available for almost any valve size. The maximum working temperature is up to 300 °C. As shown below, the high isolating Flexi-jaxx means energy savings for many kinds of processes. The low-cost Flexi-jaxx from DP Systems are easy to install and easy to remove on site, which saves time and effort.

Flexi-jaxx can be tailor-made manufactured for every industrial purpose.

Manifold with isolating Flexi-Jaxx

Isolating valves with valve jackets means energy savings

Non-isolated valve above
Isolated valve in circle

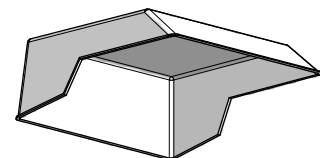

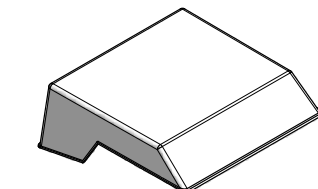

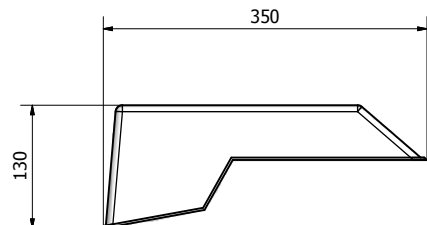

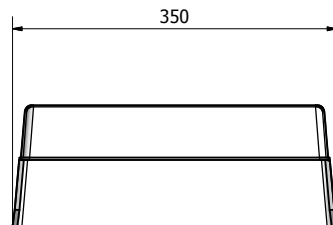

Heat losses (heat camera detection)
Isolated valve shows zero heat emission

Sunshades

Series 99-1
Standard

Series 99-2
Full sided

This low cost range of covers offers protection of instrumentation against direct sunlight, acid rain and snow. These shades improve instrument accuracy by eliminating temperature increase due to direct sunlight. The covers also provide protection from falling liquids and debris. Supplied complete with mounting clamp for mounting cover on 2"N/B standpipe. Two types of clamps are available mounted either on the back or top panel.
